

Carbon Reduction Plan

Supplier name: LifeSignals Europe Ltd.

Publication date: 19/02/2026

Commitment to Achieving Net Zero

LifeSignals Europe Ltd. is committed to achieving Net Zero greenhouse gas emissions by 2050 or earlier across its UK operations, in line with the UK Government's commitment under the Climate Change Act and NHS Net Zero ambitions.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline year: 2026 (first reporting year)

Additional details relating to the baseline emissions calculations:

- LifeSignals Europe Ltd. has not previously completed a formal organisational carbon footprint in accordance with the Greenhouse Gas (GHG) Protocol.
- Scope 1 and Scope 2 emissions are expected to be minimal, reflecting the organisation's small, predominantly remote workforce and the absence of owned or controlled office facilities, manufacturing sites, or company vehicles.
- No historical Scope 3 emissions data is currently available.
- This Carbon Reduction Plan represents LifeSignals Europe Ltd.'s first formal emissions reporting exercise and establishes the baseline year for future reporting.
- LifeSignals Europe Ltd. commits to completing a full Scope 1 and Scope 2 emissions assessment, together with the required subset of Scope 3 emissions, within 12 months of publication of this plan.

Baseline year emissions:

Emissions	Total (tCO2e)
Scope 1	Not yet measured
Scope 2	Not yet measured
Scope 3 (included sources)	Not yet measured
Upstream transportation and distribution	Not yet measured
Waste generated in operations	Not yet measured
Business travel	Not yet measured
Employee commuting	Not yet measured
Downstream transportation and distribution	Not yet measured
Total emissions	Not yet measured

Current Emissions Reporting**Reporting year:** 2026

As this is LifeSignals Europe Ltd.'s first Carbon Reduction Plan, the baseline year and current reporting year are the same. Quantified Scope 1, Scope 2, and required Scope 3 emissions data will be published in the next annual update of this Carbon Reduction Plan following the establishment of data collection processes over the next 12 months.

LifeSignals Europe Ltd. does not operate owned office facilities and has a predominantly remote workforce. Scope 1 emissions are therefore expected to be negligible, and Scope 2 emissions are limited to indirect electricity use associated with remote working and shared facilities where applicable.

Emissions will be calculated using the GHG Protocol Corporate Accounting and Reporting Standard and UK Government greenhouse gas conversion factors.

Current emissions:

Emissions	Total (tCO2e)
Scope 1	Not yet measured
Scope 2	Not yet measured
Scope 3 (included sources)	Not yet measured
Upstream transportation and distribution	Not yet measured
Waste generated in operations	Not yet measured
Business travel	Not yet measured
Employee commuting	Not yet measured
Downstream transportation and distribution	Not yet measured
Total emissions	Not yet measured

Emissions Reduction Targets

LifeSignals Europe Ltd. has adopted the following carbon reduction targets:

- Complete a full Scope 1 and Scope 2 emissions inventory within 12 months.
- Establish reporting for the required subset of Scope 3 emissions within 12 months, including:
 - Upstream transportation and distribution
 - Waste generated in operations
 - Business travel
 - Employee commuting
 - Downstream transportation and distribution
- Set appropriate emissions reduction targets once a robust emissions baseline has been established.

Progress against these targets will be reviewed annually and reported through updated Carbon Reduction Plans.

Carbon Reduction Projects

Completed and ongoing measures:

- Supplier engagement and contractual requirements addressing environmental and ethical standards.
- Design optimisation to minimise material usage in single-use biosensor products.
- Packaging size and weight optimisation to reduce transportation impacts.
- Centralised logistics and distribution planning to reduce fragmented shipments.

Planned future measures:

- Engagement with contracted manufacturing partners in South Korea to collect energy, waste, and production data.
- Assessment of opportunities to reduce reliance on air freight and transition to lower-carbon transport modes.
- Review of end-of-life considerations.
- Improved internal data collection for business travel and employee commuting.

Approval and Publication

This Carbon Reduction Plan is published on LifeSignals Europe Ltd.'s publicly accessible corporate website. LifeSignals Europe Ltd. does not operate a UK-specific domain.

Declaration and Sign-Off

This Carbon Reduction Plan has been completed in accordance with PPN 006 and associated guidance and reporting standards for Carbon Reduction Plans.

Emissions will be reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard, and will use the appropriate UK Government emission conversion factors for greenhouse gas company reporting.

Scope 1 and Scope 2 emissions will be reported in accordance with SECR requirements (where applicable), and the required subset of Scope 3 emissions will be reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.

This Carbon Reduction Plan has been reviewed and approved by company leadership (or equivalent management body).

Signed on behalf of the supplier:
