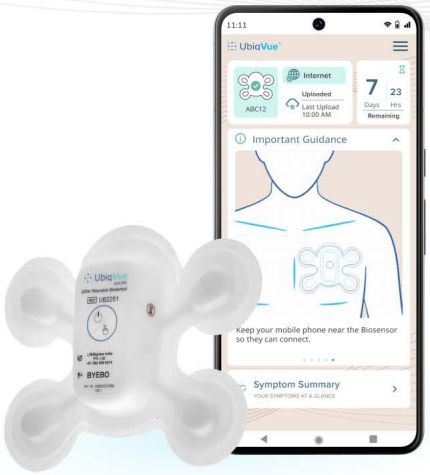
LifeSignals® | UbiqVue™

Cardiac Monitoring Without Delay

A connected, single-use Holter monitoring solution designed to simplify the experience for practices and patients.



2-Channel wearable biosensor

Patient-facing app

Secure data transfer

ECG analysis & Holter reporting

Three Reasons to Consider UbiqVue™ Holter

SPEED

Reports in Hours, Not Days

- Reports delivered in as little as 4 hours and typically within 48 hours.[1]
- Automated data transfer helps eliminate unnecessary manual touchpoints and delays.
- Faster path from uploaded data to expert-verified report supports faster clinical decision-making.

WORKFLOW

Zero Device Returns

- In the app-based workflow, ECG data is uploaded automatically.
- No mail-backs. No drop-offs. No device-return logistics.
- Simplified for your staff, convenient for your patients.

CLINICAL VALUE

Two Channels. Greater Clinical Insight.

- Continuous 2-channel ECG monitoring supports arrhythmia detection and P-wave visualization.
- The two-channel design improves diagnostic yield versus single-channel monitoring and provides redundancy in lead-off or noise scenarios.

PATIENT EXPERIENCE[2]

96.0% Easy/Very easy application

92.1% Satisfied/Very satisfied overall experience

LifeSignals® | UbiqVue™

How It Works

A streamlined Holter workflow from enrollment through report delivery designed to save time, reduce friction, and improve patient and practice experience.

Primary app-based workflow

Skip the Trip Back | Automatic data upload. No device returns.

1 **Enroll**
Patient is enrolled by your practice.

2 **Apply & Monitor**
Biosensor is applied on the left chest. Patient monitors as instructed.

3 **Automatic Data Upload**
Biosensor data securely uploaded to the cloud via the Holter app.

4 **Analyze & Generate Report**
Certified cardiac technicians analyze ECG data and generate the Holter report for physician review.

5 **Deliver Report**
Final report and audit trail delivered to your practice.

4-48 hours from successful data upload to report delivery

Need a non-app option?
UbiqVue also supports a patient-return workflow for in-office data upload and paper symptom diary.
